

Our Facilities

At International Cancer Specialists (ICS), our facilities are thoughtfully designed to provide patients with a comfortable, private, and supportive environment throughout their treatment journey.

Private Treatment Rooms

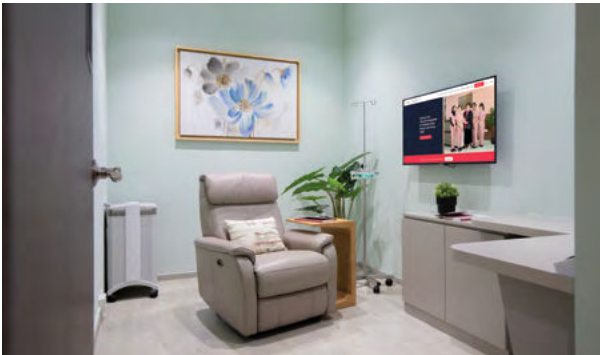

Chemotherapy treatments are delivered in individual private treatment rooms, providing patients with greater privacy and dignity for themselves and their loved ones who may accompany them. The calm and personal setting helps reduce stress and anxiety, allowing patients to feel more comfortable during treatment. Each room is equipped with a television, allowing patients to relax, watch their preferred programmes, or spend time with loved ones while receiving focused and attentive care from the nursing team. This personalised environment supports both physical comfort and emotional well-being throughout each session.

Cold Cap (Scalp Cooling)

For suitable patients undergoing chemotherapy, cold cap (scalp cooling) therapy is available to help reduce chemotherapy-related hair loss. Our nursing team provides guidance and support throughout treatment to ensure comfort and proper use.

Cold Therapy for Hands and Feet

During chemotherapy, cold therapy may be applied to the hands and feet to help numb the extremities and reduce certain treatment-related side effects affecting the fingers and toes. Patients are closely supported by our nursing team throughout the session.

INTERNATIONAL CANCER SPECIALISTS

Caring for You with

Integrity Competence Service

Who We Are: ICS Care Team

Early detection of cancer can increase the chances of a full recovery. Our cancer-focused health screening services are personalised to every individual's unique background and health status. Feel free to let us know your concerns, such as any symptoms, changes in your body, medical history or any unusual results from previous scans, and we will assist you on the care process and relevant costs.

Our experienced care team has supported thousands of patients and their carers from Singapore and close to 40 other countries on their journey with cancer screening, treatment and recovery.

Our Vision

We aim to save the lives of cancer patients from around the world through competent, compassionate and accessible care for all types of cancers.

Our Mission

We care with compassion.
We deliver competent care that inspires hope, confidence and trust.

Our Core Values

Integrity in Our Conduct
Competence in Our Care
Service in Our Interactions

Our Core Services

At International Cancer Specialists (ICS), our core cancer treatments include **Chemotherapy, Immunotherapy, Targeted Therapy, and Hormonal Therapy**. Each treatment plan is carefully tailored to the individual, taking into account the type and stage of cancer, the patient's overall health, treatment goals, potential side effects, and recovery needs, to ensure care is both effective and appropriate.

Chemotherapy uses medication to destroy or slow the growth of cancer cells and may be administered intravenously at the clinic or orally in tablet or capsule form. Treatment is usually given in cycles with rest periods, allowing the body time to recover between sessions.

Throughout treatment, patients are supported by our specialist doctors and nursing team, with close monitoring during each session, guidance on managing treatment-related side effects, and regular review of treatment plans to ensure safe and appropriate care.

Beyond treatment, ICS offers **Cancer-focused Health Screening** for early detection, **Tele-consultation Services**, and **Patient Liaison Support**, including assistance for overseas patients. Together with our Medical Oncology, Haematology, and Second Opinion Services, ICS delivers coordinated specialist cancer care with clarity and confidence.

Cancer-focused Health Screening & Lung Cancer Screening

Early detection of cancer significantly improves treatment outcomes and survival rates. At **International Cancer Specialists (ICS)**, our cancer-focused health screening programmes are designed to support early detection and help individuals gain a clearer understanding of their overall health status.

Cancer-focused Health Screenings

This screening programme is suitable for individuals who wish to take a proactive approach to their health and identify potential cancer risks at an early stage.

Core Cancer Screening Package includes:

- Medical Specialist Consultation
- Detailed Medical History Analysis
- Blood Tests, including cancer markers
- Resting Electrocardiogram (ECG)
- Chest X-Ray
- Ultrasound Abdomen (Male) / Ultrasound Breast (Female)
- Detailed Body Composition Analysis

Lung Cancer Screening

Lung cancer is one of the most common cancers worldwide, and many patients remain asymptomatic until the disease has advanced. With advances in **Low-Dose Computed Tomography (LDCT)**, lung cancer can now be detected earlier with reduced radiation exposure.

Lung Cancer Screening Package includes:

- Medical Specialist Consultation
- Detailed Medical History Analysis
- Blood Tests
- Low-Dose CT Scan
- Chest X-Ray
- Detailed Body Composition Analysis

Additional investigations are available as optional add-ons, based on individual preferences.

Support for Patients & Unique Offerings

At International Cancer Specialists (ICS), we support patients and their loved ones at every stage of the cancer journey — from pre-treatment to aftercare.

Our doctors and nurses provide continuous care through treatment and beyond, offering guidance before, during, and after treatment, ongoing monitoring and follow-up, emotional and mental well-being support, and assistance in connecting patients and caregivers with counselling or psychiatric services when needed.

Comprehensive Financial Counselling

At the first visit, our nursing team discusses the financial aspects of treatment to help patients and families understand care scope and cost considerations, enabling informed planning with clarity and confidence.

Support for Overseas Patients

ICS supports overseas patients from pre-arrival preparation to post-treatment follow-up, including consultation scheduling, review of medical records, and ongoing communication and care coordination.

Unique Offering – Healing Through Art

ICS takes a holistic approach to care through our *Healing Through Art* programme, featuring therapeutic Chinese painting sessions guided by Dr Leon K. L. Chew. The programme supports emotional well-being, relaxation, and connection, complementing medical treatment.

Overseas Care & Shared Care Programme

At **International Cancer Specialists (ICS)**, cancer care extends beyond Singapore through overseas collaborations and shared care arrangements, supporting continuity of care across borders. Based in Singapore, ICS has regional offices in **Jakarta, Indonesia**, and **Ho Chi Minh City, Vietnam**, expanding access to competent and compassionate cancer care in the region.

Through collaboration with trusted partner hospitals, clinics, and care providers in the region — including the ICS-affiliated cancer clinic in Jakarta — patients may receive specialist oncology care locally without the need to travel to Singapore for every consultation. Care provided at these partner facilities follows ICS' Singapore standards and clinical practices, with guidance from the ICS medical team.

Medical teams in Singapore and the region work closely together to ensure continuity of care and consistent treatment approaches. Patients who require treatment in Singapore are supported with appointment coordination and personalised patient concierge services.

After returning home, our regional partners continue to support our patients' recovery, helping manage treatment or chemotherapy-related side effects locally, while reducing the need for frequent travel. Regional patient liaison teams in Indonesia and Vietnam provide on-call support in native languages, assisting with care coordination, tele-consultations, medical updates, travel arrangements, and emergency support.
